

Town Board Talking Points

Opposition to the Proposed Amazon Facility in Holbrook

- **This is not about being anti-Amazon.** It is about whether a development of this enormous scale belongs at this particular location.
- **The proposed facility is approximately 4.2 million square feet.** The sheer size and intensity of this project should concern every resident of Holbrook and the surrounding communities.
- **The property is not currently zoned for this use.** The project requires a change of zone. We are asking the Town Board to **vote NO on that zoning change** rather than changing our zoning to accommodate a project that does not fit the surrounding community.
- **Protect the residential neighborhoods.** Established homes and neighborhoods are located near this site. Residents purchased their homes based on the existing character and zoning of this area - not expecting one of the largest distribution facilities in the country nearby.
- **Traffic is one of our greatest concerns.** A facility operating at this scale could bring significant additional tractor-trailer, delivery-van, employee, and commercial vehicle traffic to roads and intersections that residents already know are congested.
- **We need an independent, comprehensive traffic analysis.** The Town should consider not only the immediate property entrance, but the cumulative impact on Nichols Road, Sunrise Highway, Veterans Memorial Highway, and surrounding residential roads and intersections.
- **Public safety must come before development.** More trucks, vans, and vehicles mean more interaction with school buses, pedestrians, cyclists, commuters, and emergency vehicles.
- **The environmental consequences deserve serious scrutiny.** The property contains substantial natural landscape and is located near environmentally sensitive areas. Once mature trees and natural habitat are removed, they cannot simply be replaced.
- **Groundwater and stormwater must be protected.** Long Island depends on its sole-source aquifer. A project of this size requires extraordinary scrutiny of drainage, runoff, contaminants, and long-term environmental impacts.
- **Noise and light pollution matter.** A large-scale facility operating around the clock could fundamentally change the quality of life for nearby residents, particularly during overnight hours.
- **Air quality matters.** The cumulative emissions associated with trucks, delivery vehicles, employee vehicles, and other operations must be fully evaluated, especially for nearby residential communities.
- **We question whether the promised economic benefits justify the permanent impacts.** Any claims regarding jobs and economic development should be weighed against infrastructure costs, environmental impacts, traffic, and the burden placed on the surrounding community.
- **We oppose taxpayer-funded incentives or tax abatements for this project.** A corporation of Amazon's size should not require local taxpayers to subsidize a development that could significantly affect their own quality of life.
- **The community deserves full transparency.** Residents should have access to the complete site plans, environmental studies, traffic studies, proposed operating information, requested zoning changes, and any applications for financial incentives before decisions are made.
- **The Town does not have to approve every development simply because land is available for development.** Good planning means determining whether a project is appropriate for the location.

- **There are better possibilities for this property.** We support responsible development that creates economic opportunity while remaining compatible with Holbrook and the surrounding communities.
- **Once the zoning is changed and a project of this magnitude is built, we cannot undo it.** This decision will affect Holbrook for generations.
- **We are asking you to put residents first.** Protect our neighborhoods, infrastructure, environment, property values, and quality of life.
- **Please vote NO on the requested change of zone and do not approve this project in its current form.**

Strong Closing

Amazon may be a good company and warehouses may be necessary - but that does not mean a 4.2-million-square-foot facility belongs in this location. We are asking you to listen to the residents who will live with this decision long after the developers leave. Please protect Holbrook and vote no.
